

Autonomous Incident Report

Generated: 2026-02-05T15:48:41.463Z

Root Cause Analysis

Diagnosis: The application explicitly throws a 'SeededDemoFailure' when the action 'cause_error' is received. This appears to be a test artifact left in production code.

Confidence: 95%

File: apps/sample-app/src/index.ts:24-29

Pull Request Details

Fix: The application explicitly throws a 'SeededDemoFai...

Root Cause

The application explicitly throws a 'SeededDemoFailure' when the action 'cause_error' is received. This appears to be a test artifact left in production code.

Changes

- Applied patch to `apps/sample-app/src/index.ts`
- Removed faulty logic causing deterministic failure.

Verification

A reproduction test has been generated.

1. Run the test to confirm failure (repro):

```
`bun run app/test/generated/repro.test.ts`
```

2. Apply the patch:

```
`patch -p0 < autopsy/patches/patch-1.diff`
```

3. Run the test again to confirm fix.

Verification Logs

Pre-Patch (Failure)

```
bun test v1.3.8 (b64edcb4)
Trigger status: 500
Bug reproduced: 500 Internal Server Error
